

TransLink Management Report

December 7, 2017

2017 expansion under Phase One

Notes: Improvement planned for the 96 B-Line is implementation of all-door boarding, not a change in level of service.
December/January improvements for routes 130, 733, 741, 372, 351 are minor changes related to September service changes.
Includes improvements made through Phase One funding and base budget.

Toll removal analysis

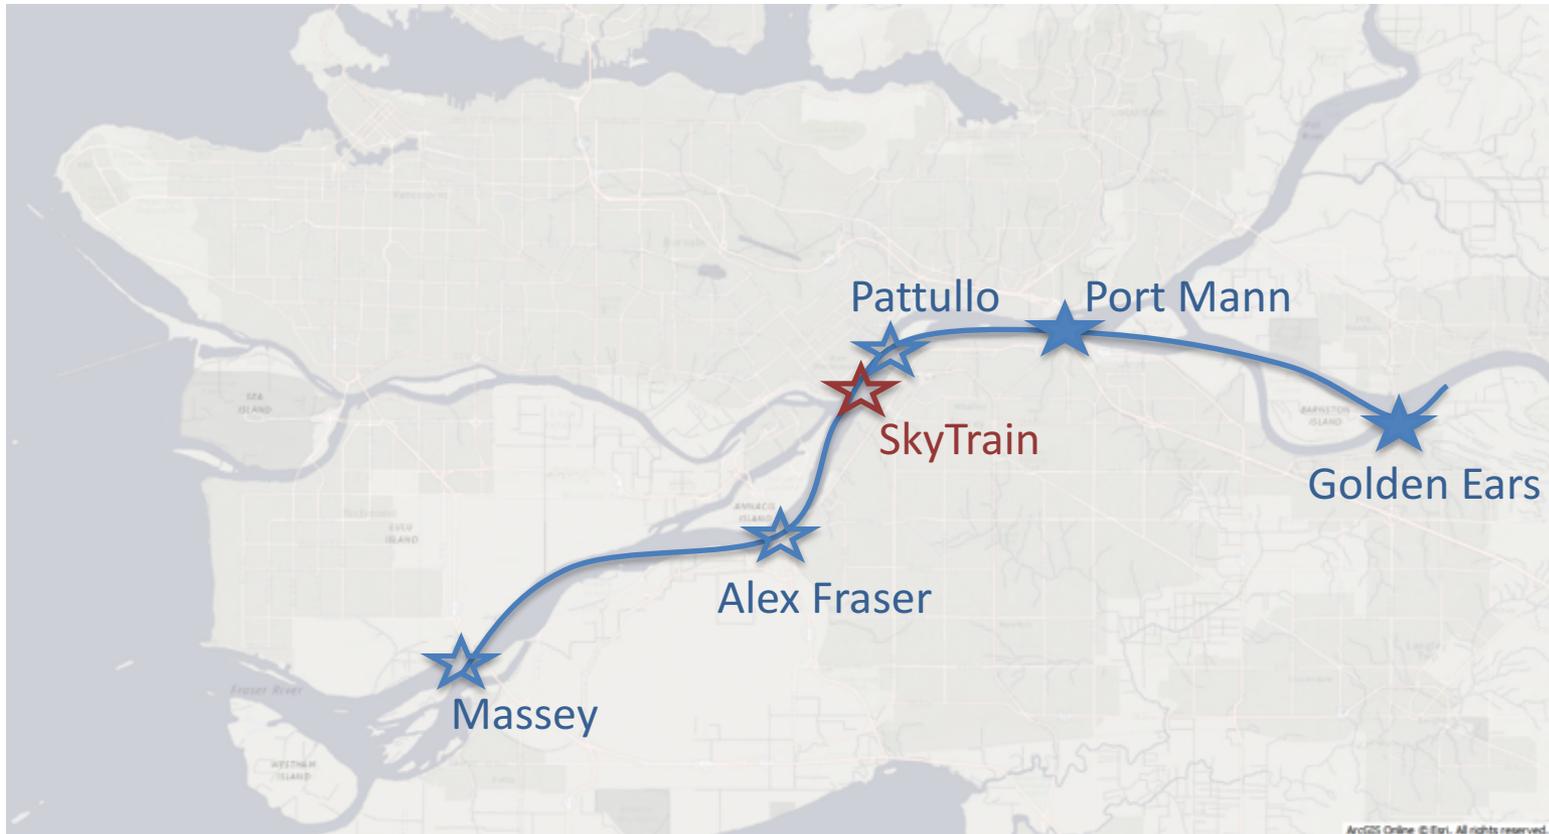

Understanding changes in travel behaviour is important

- Congestion
- Mobility Pricing

Natural experiments in pricing are rare

South of Fraser Crossing Screenline

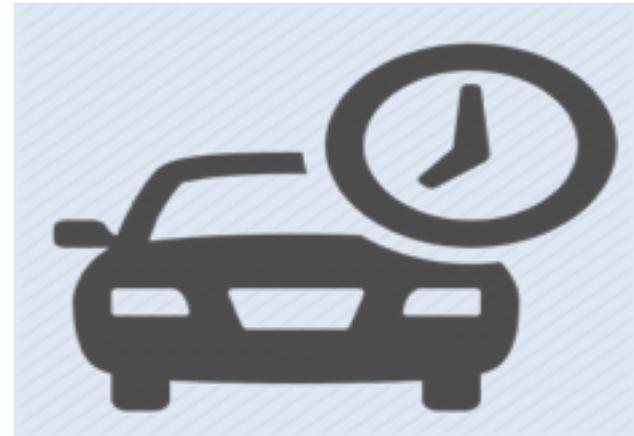

Pre/Post Analysis

Traffic Volumes

Travel Times

Transit Ridership

Data Sources

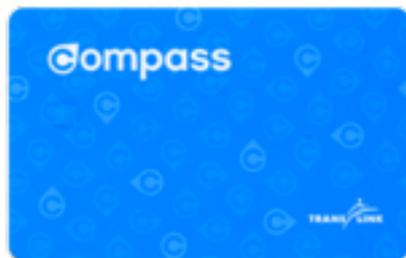

Traffic Counts

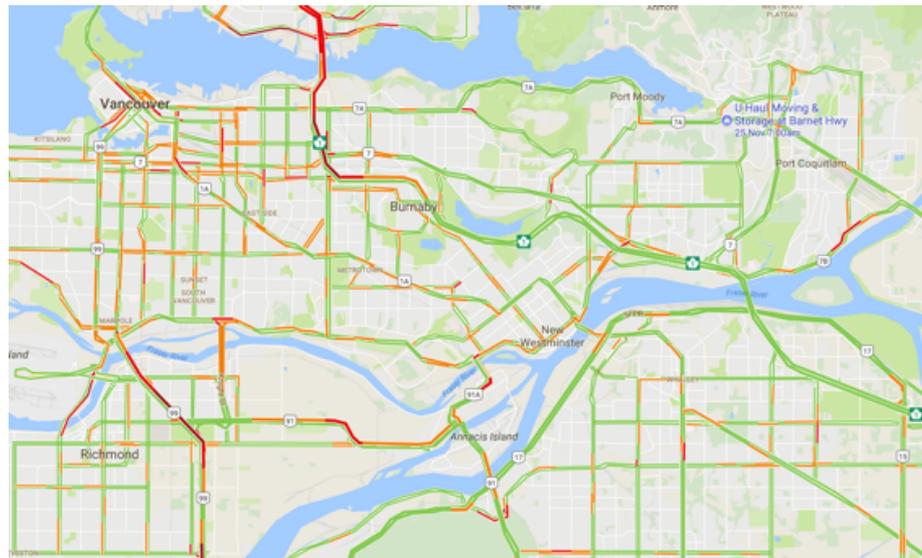

Ministry of
Transportation
and Infrastructure

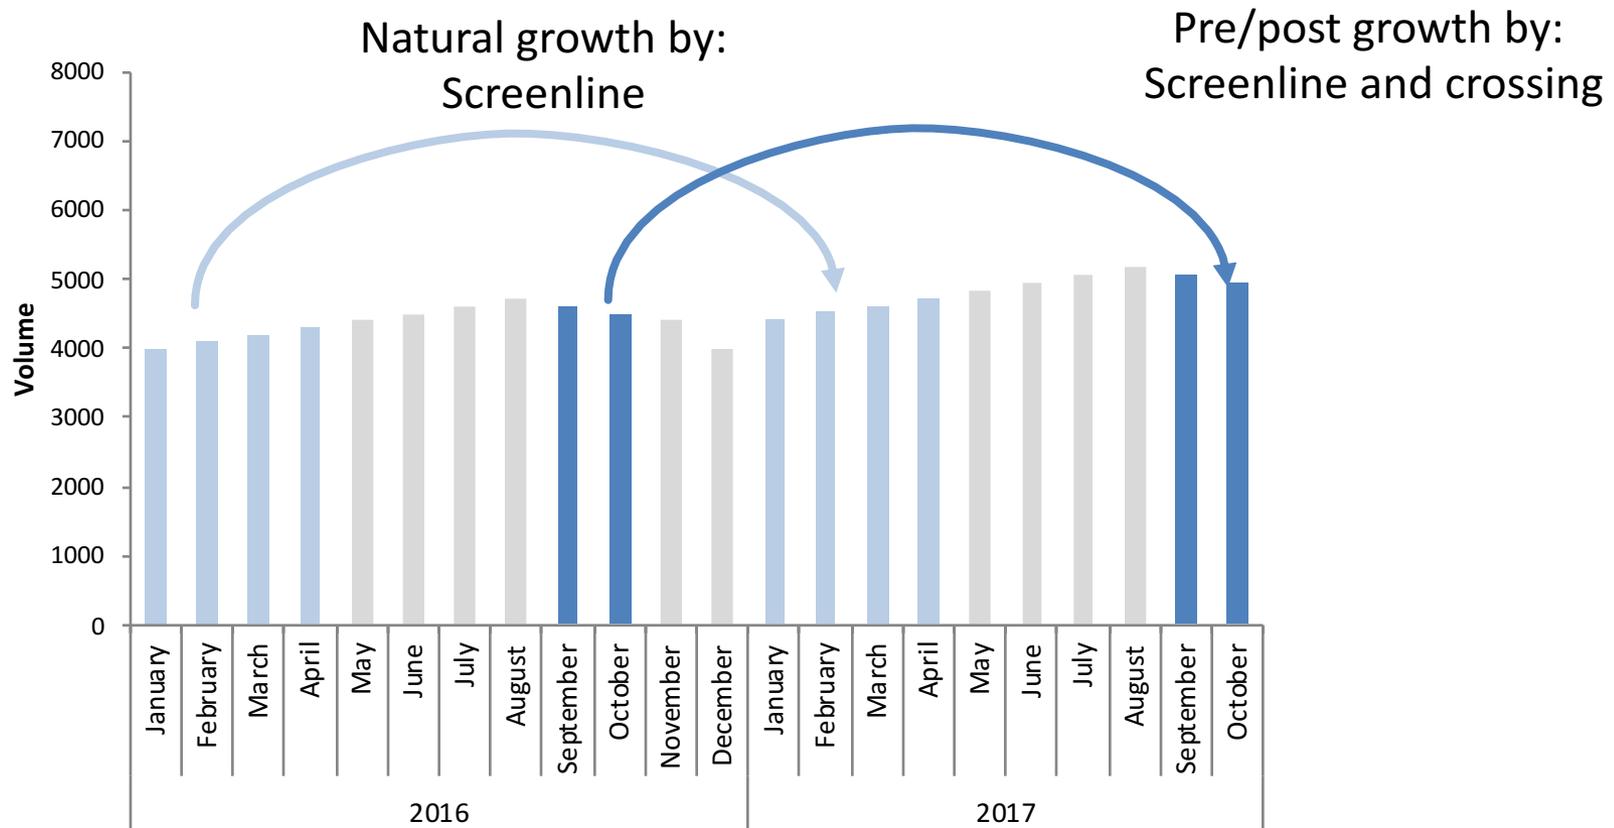

Transit Ridership

Travel Times

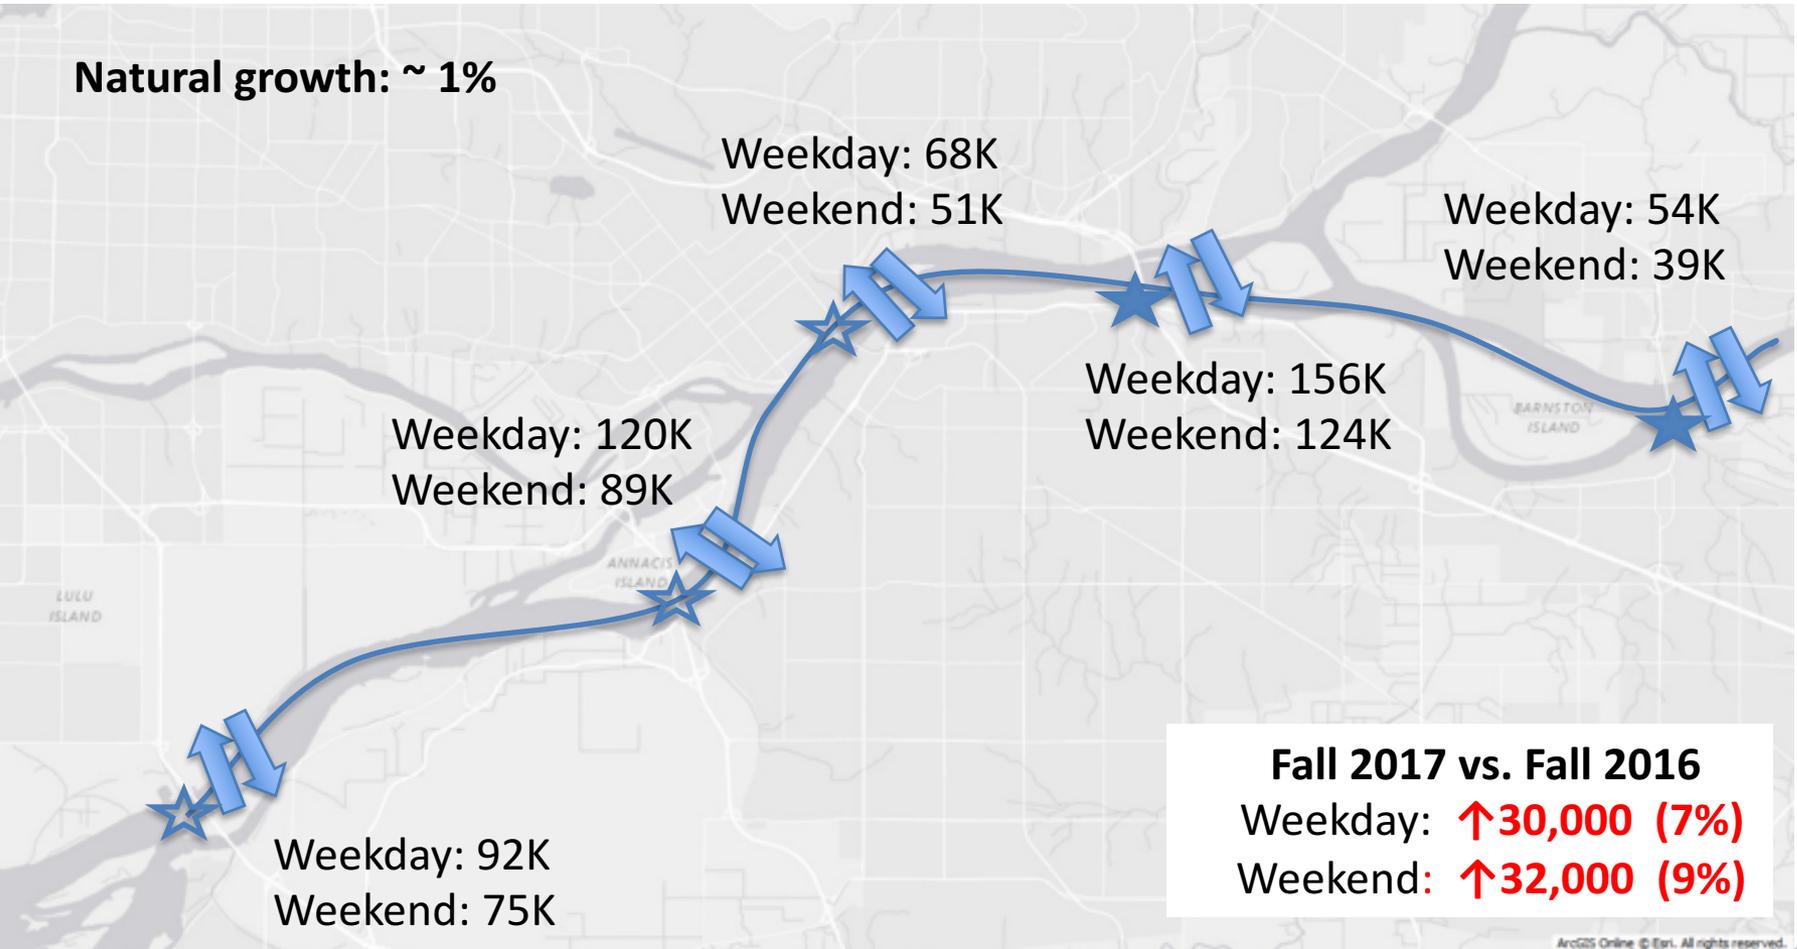

Analytical Approach

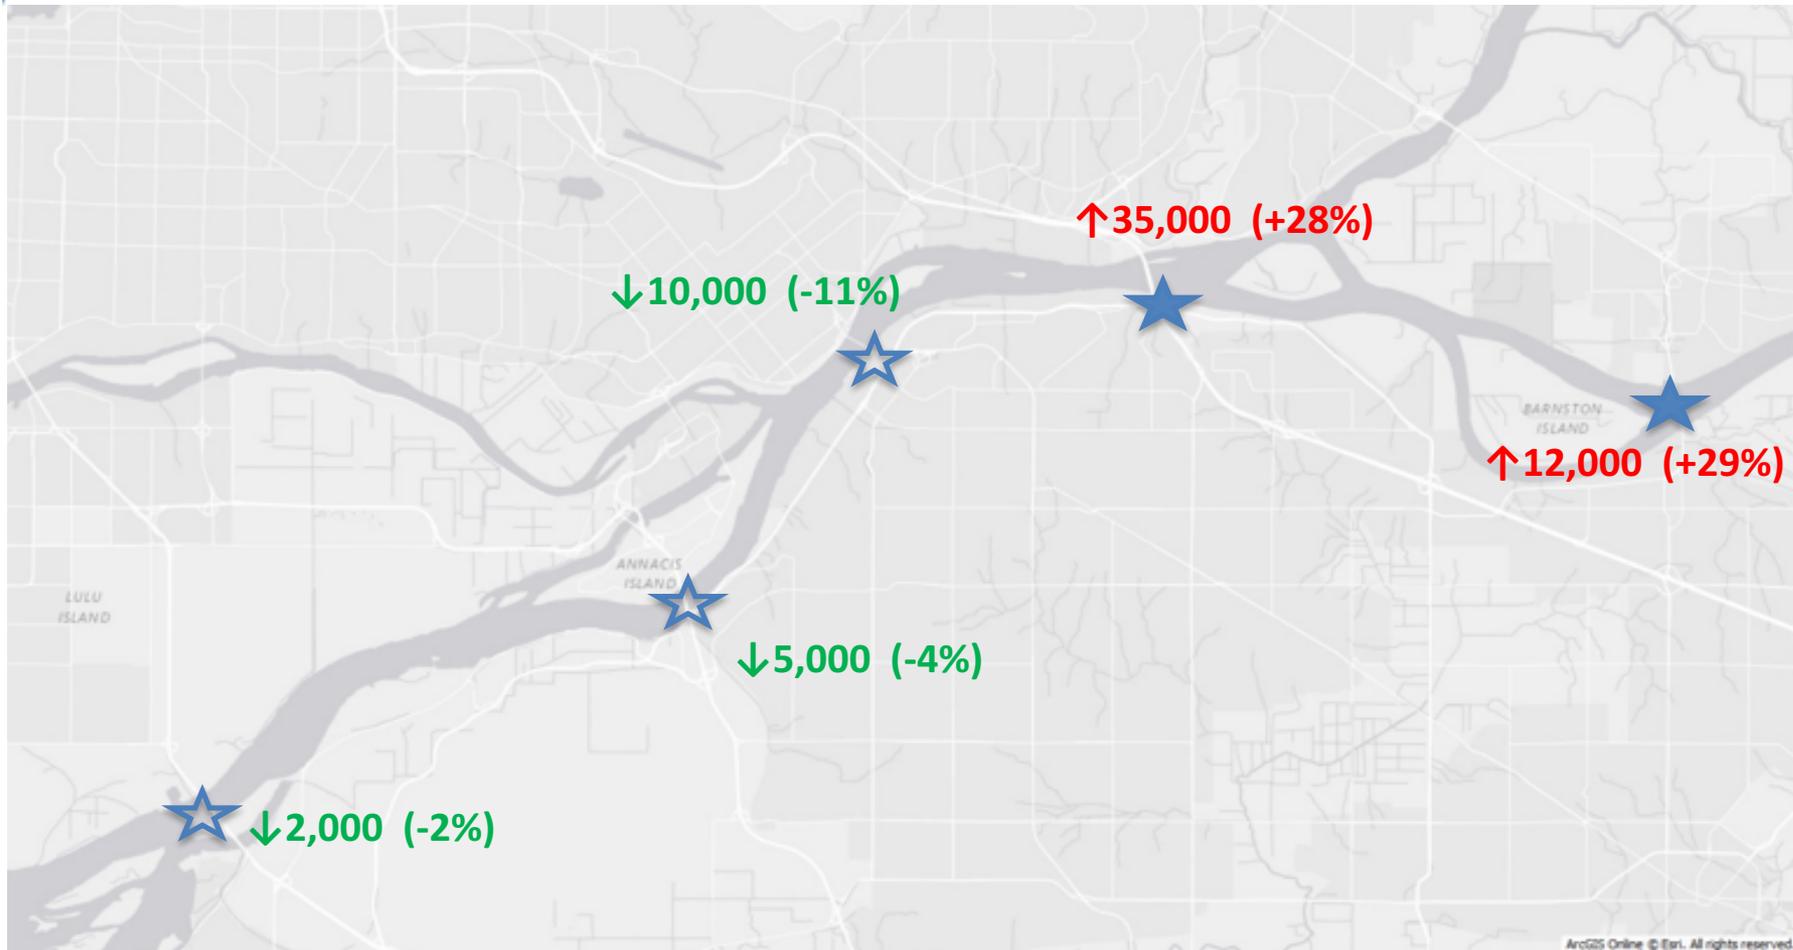

Traffic volumes across the Fraser increased significantly

Natural growth: ~ 1%

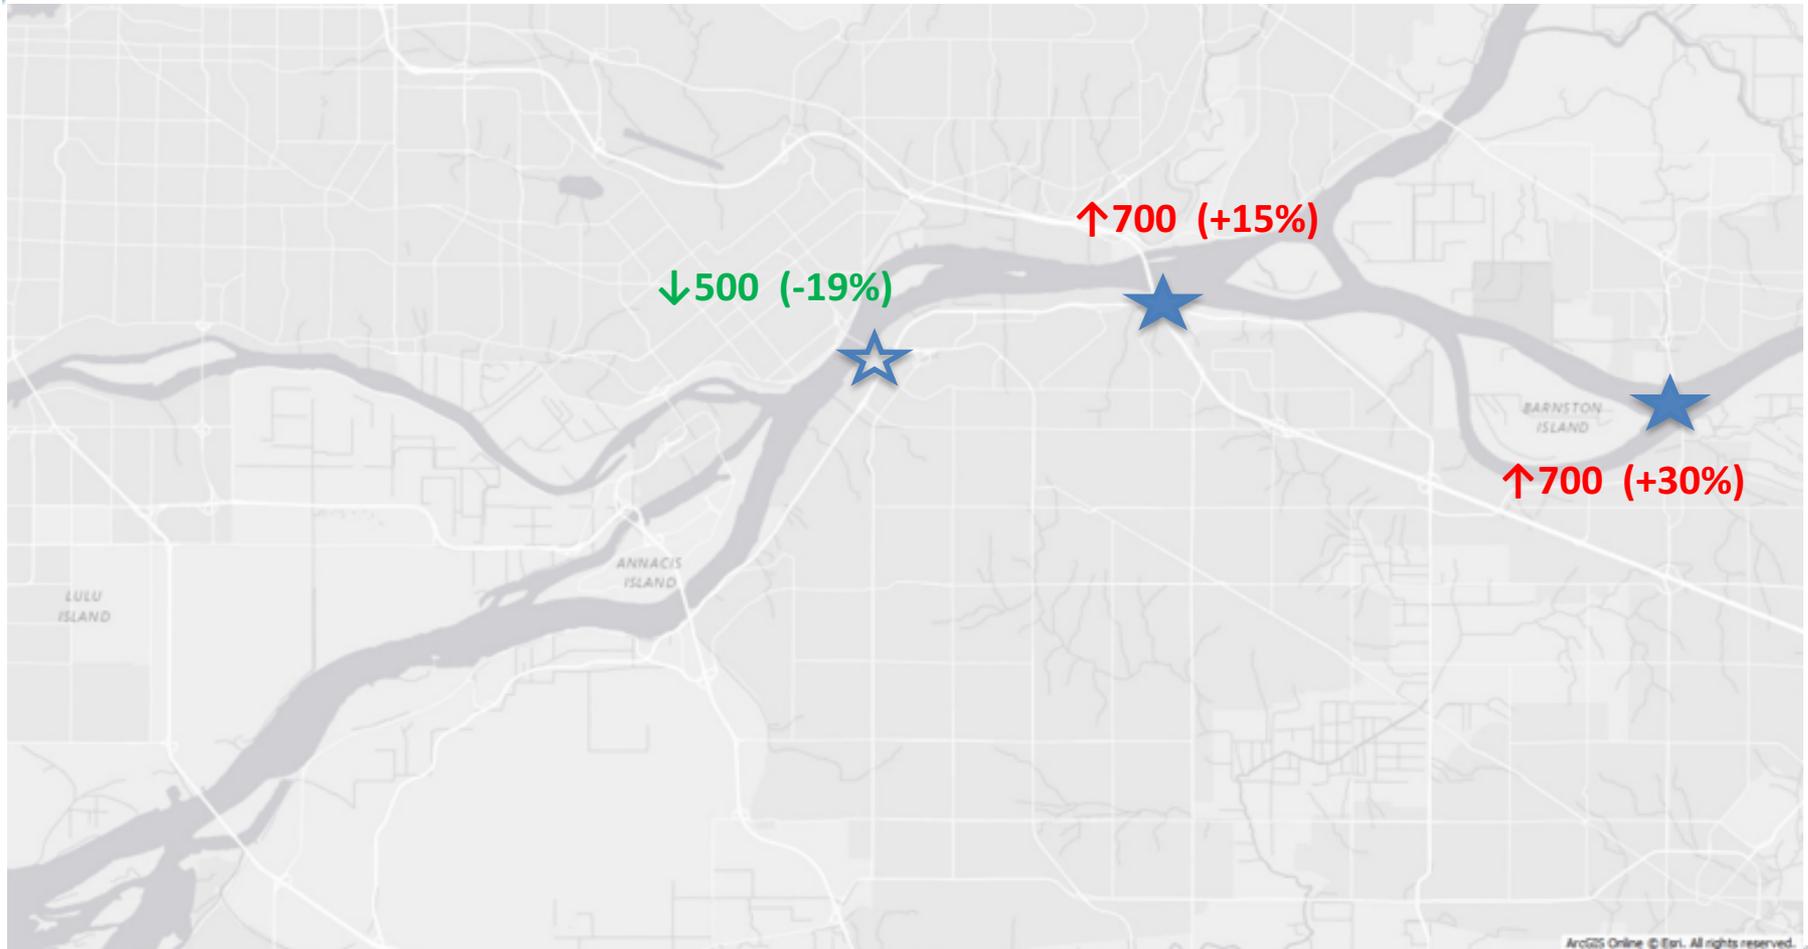

ArcGIS Online © Esri. All rights reserved.

Diminishing effects away from the policy change

High truck sensitivity to tolling

Unexpected route changes

20503-20537 Lougheed Hwy, Maple Ridge
Trans-Canada Hwy, Burnaby, BC V3N

Depart at 8:00 AM Mon, Nov 20

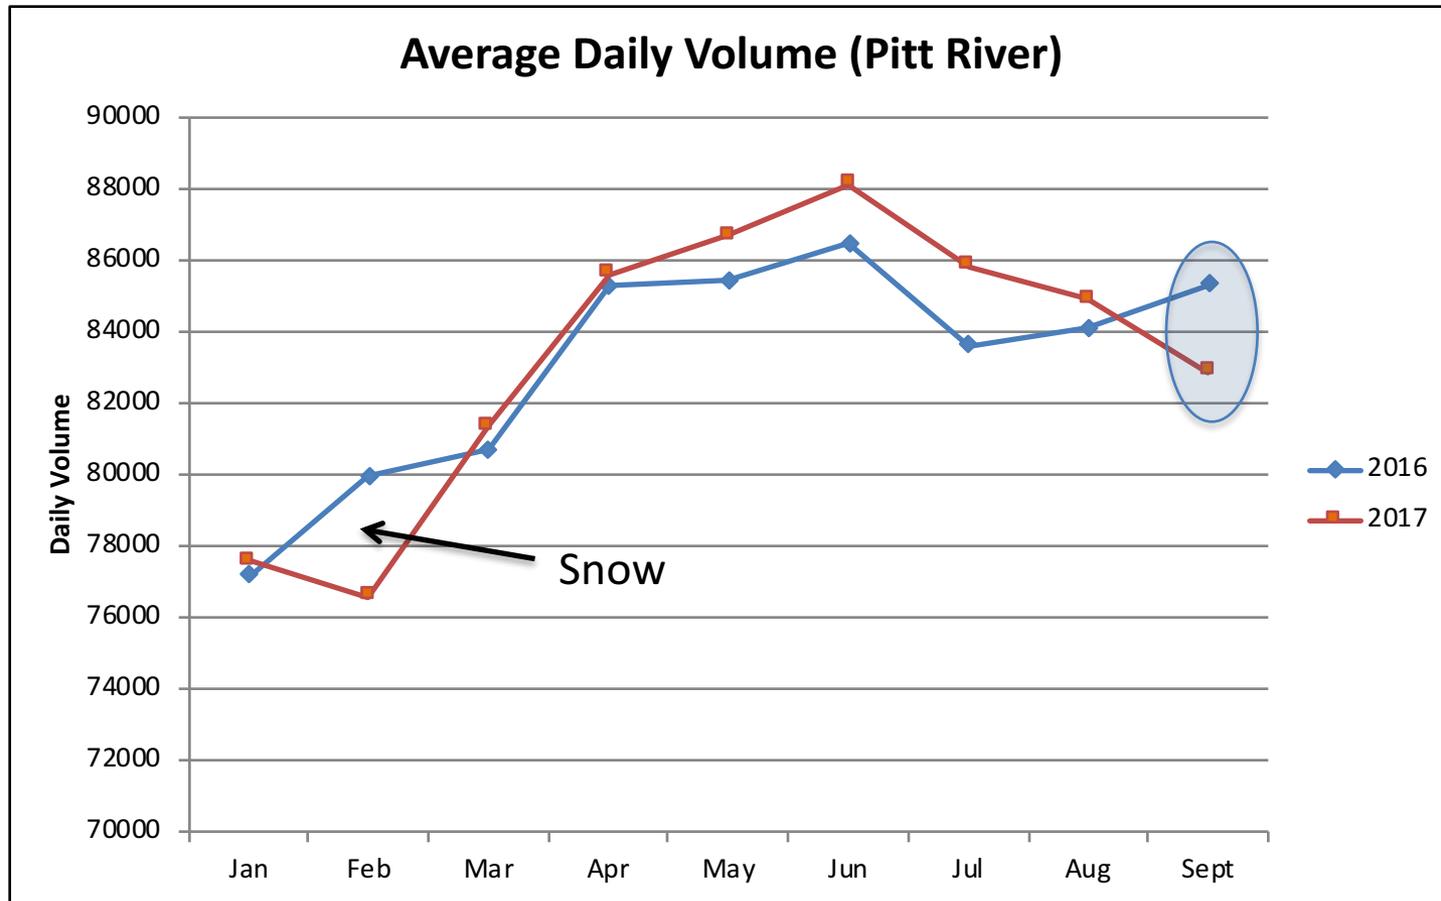

Send directions to your phone

via Lougheed Hwy/BC-7 W, BC-7B and Trans-Canada Hwy/BC-1 W **typically 18 - 35 min**
Arrive around 8:35 AM
21.5 km

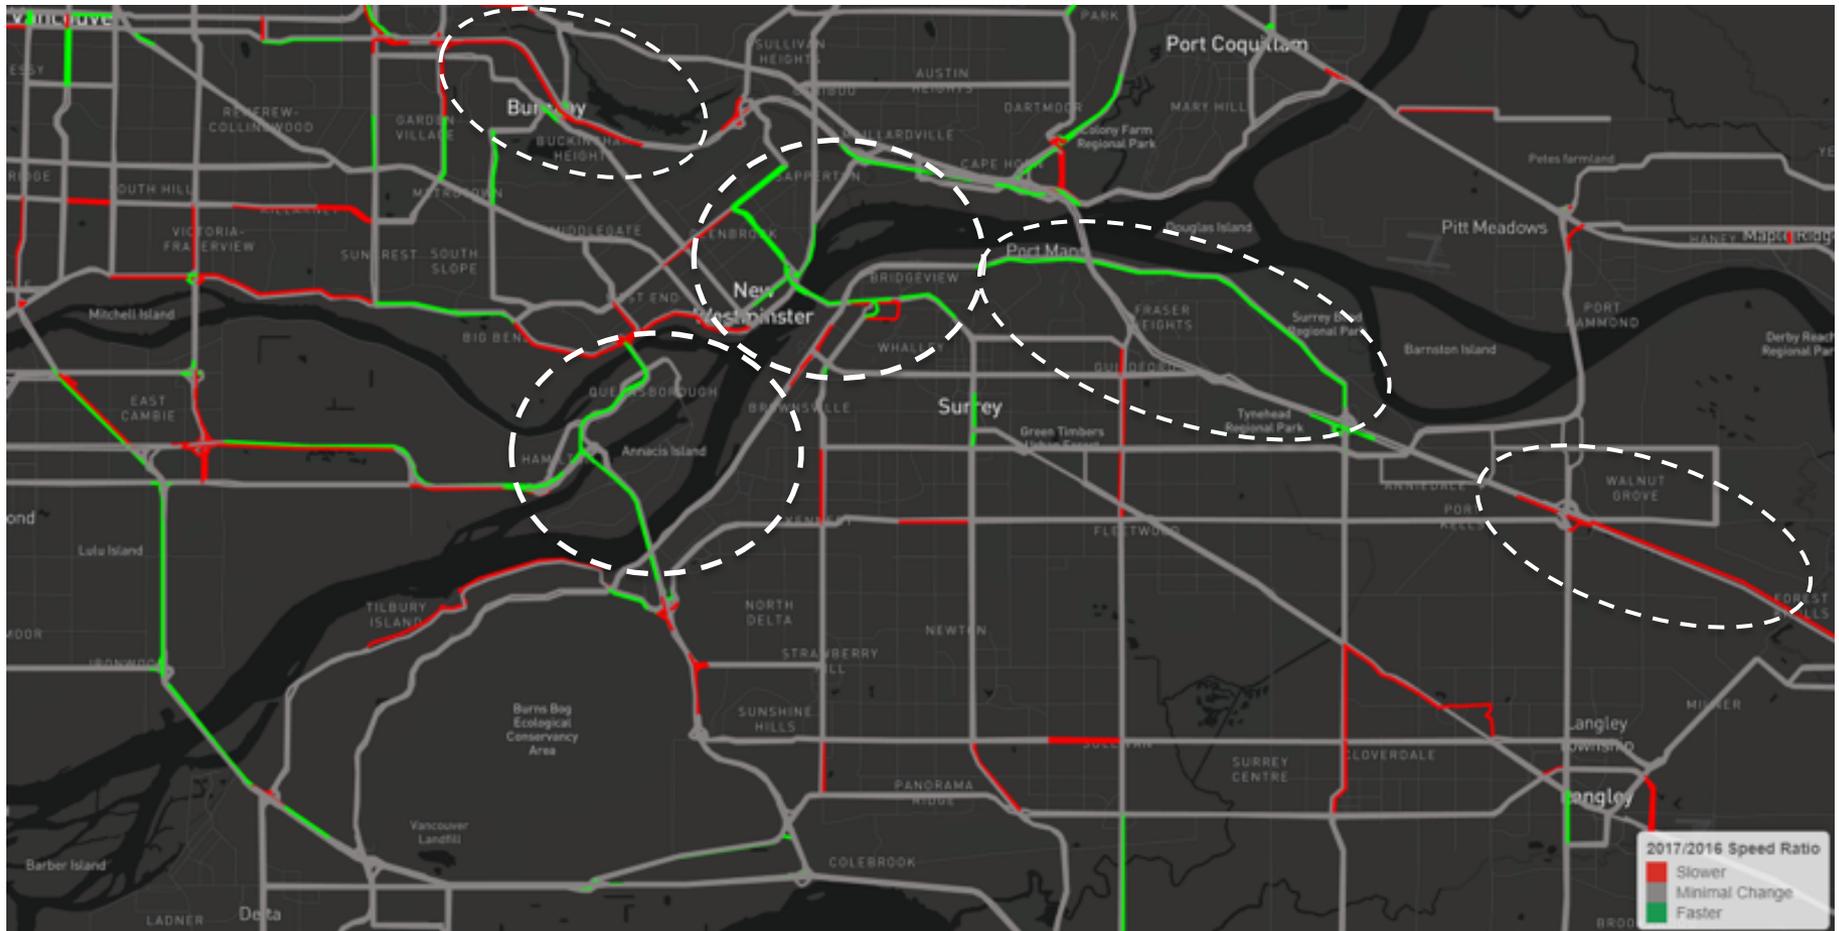

via Trans-Canada Hwy/BC-1 W **typically 20 - 30 min**
Arrive around 8:30 AM
28.2 km

DETAILS

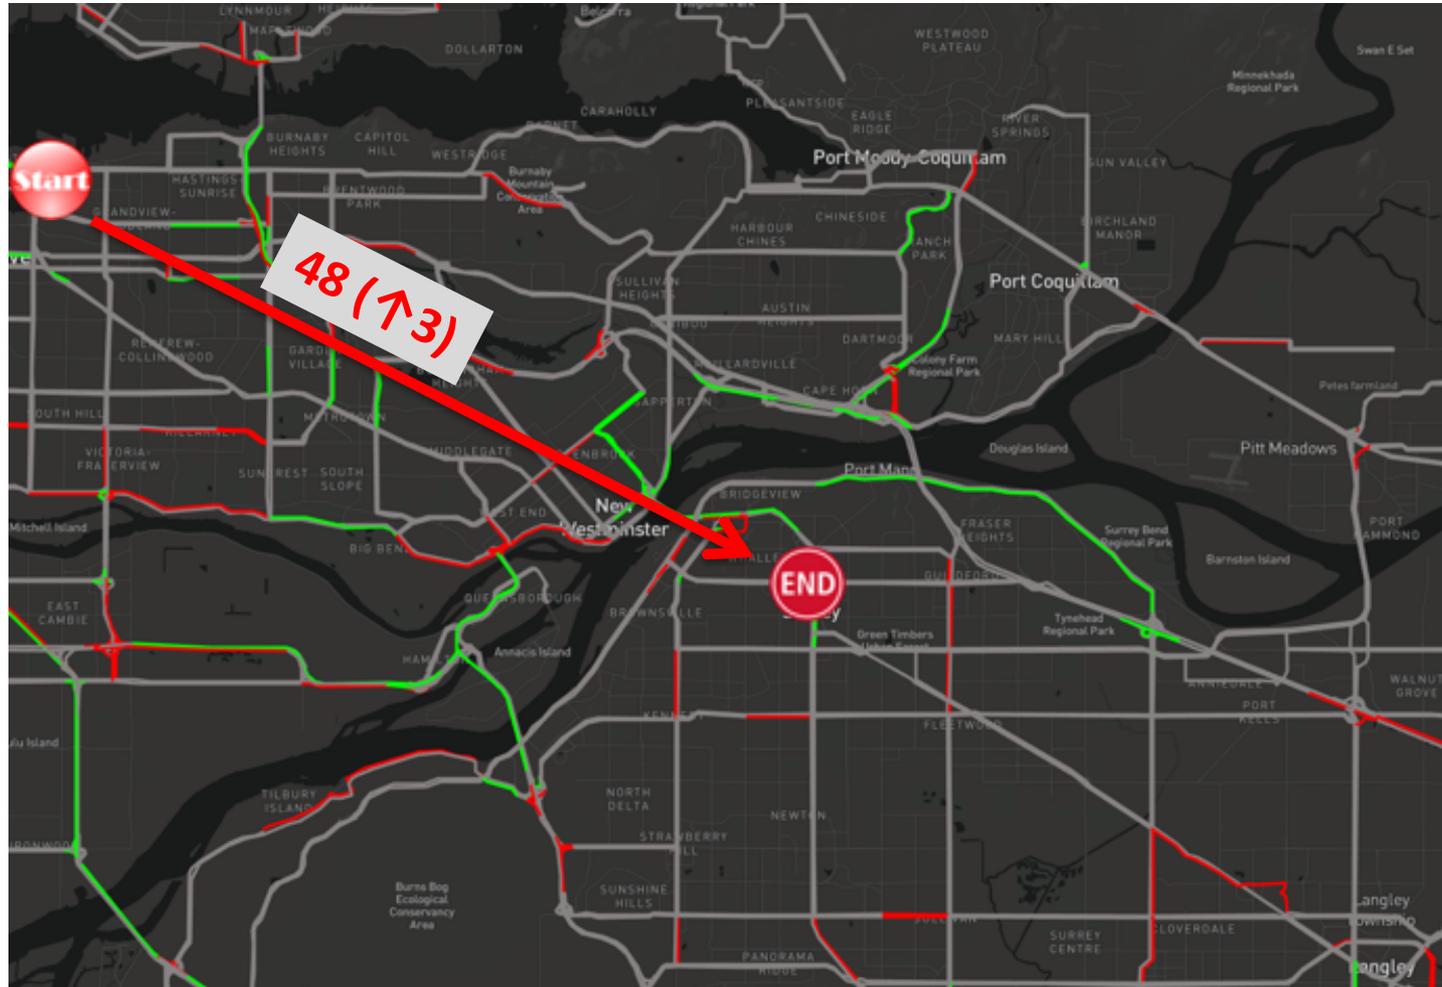

Unexpected impacts on Pitt River Bridge traffic

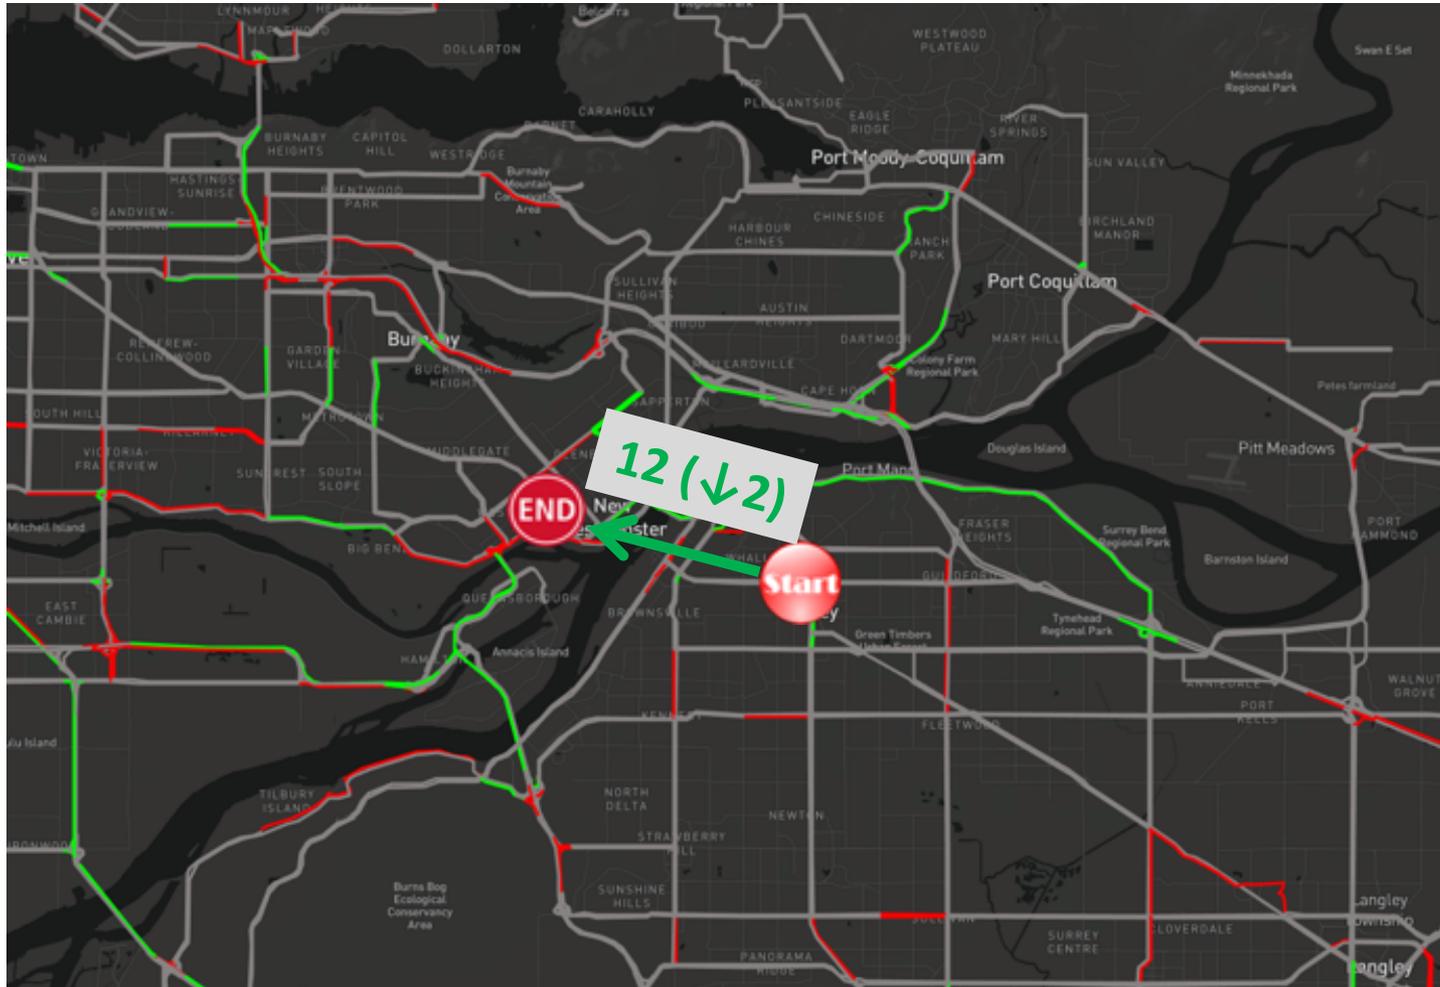

Mixed effects on Peak Hour Speeds (PM)

Increased PM travel times from Vancouver – to Surrey

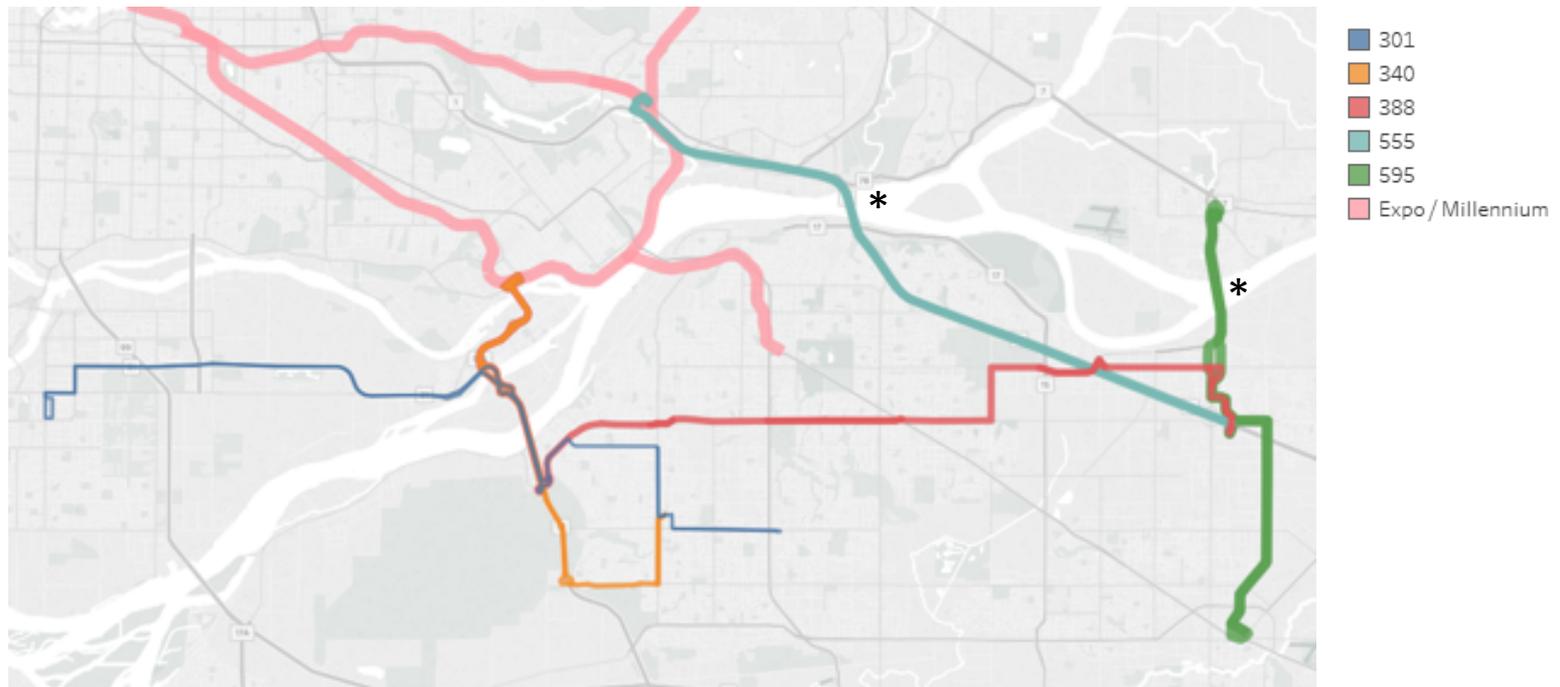

Reduction in PM travel times from New Westminster – to Surrey

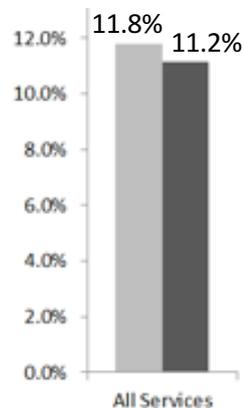

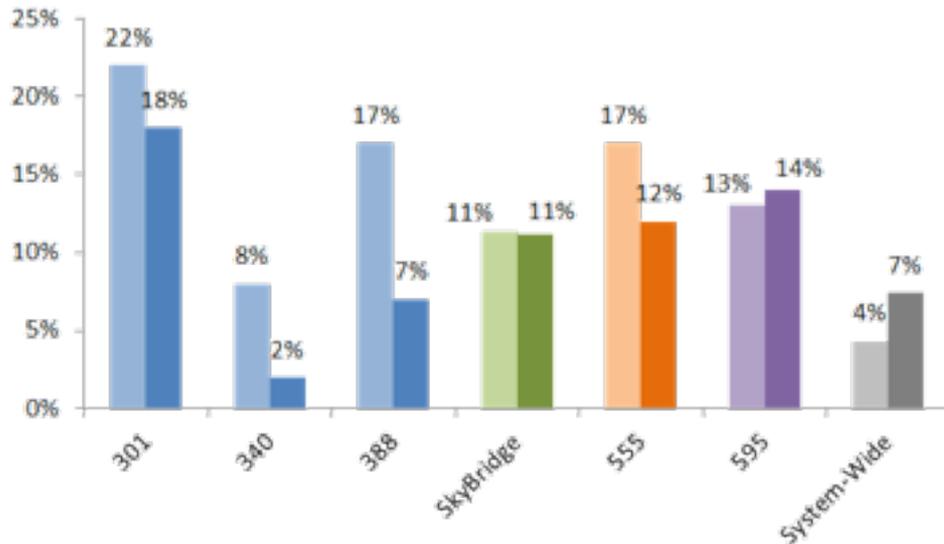

Transit Routes

Five bus routes and the Expo SkyTrain cross the Fraser River
(George Massey Tunnel excluded)

*Tolls removed

Limited transit ridership impacts

If all routes had continued growing post Labour Day at same rate as pre Labour Day, total ridership would be **600** passengers more per day.

Conclusions

- Significant increase in auto traffic across the Fraser
- Increase mainly due to new trips and destination changes
- Significant routing changes
- Trucks are more sensitive to cost than expected
- Mixed travel time implications
- Marginal mode shift
